DUSTCOATING, INC.

Dust Control/Road Stabilization

There was a time not too long ago aptly coined the “Dirty 30’s.” Ominous skies warned of ferocious dust storms barreling through the Great Plains States with relentless winds robbing their insufferable loot from fields and gravel roads...dust and lots of it!

While the dust storms of the past seem incomprehensible in today’s environment, nothing can be more intrusive to your quality of life than being near a gravel road on a sweltering summer day. It’s definitely unwelcoming when the constant parade of cars and trucks are kicking up plumes of dust that inevitably settle in every nook and cranny of your home or business!

However, there is an economical and effective solution you can initiate in concert with your local highway department, or on a direct basis, call **Dustcoating Incorporated** (952) 894-0012 to have your gravel roads and parking lots professionally treated with an environmentally friendly solution that is extraordinarily effective in helping you and your family live and breathe in a clean and pure environment!

While none of us can control the natural environment, we can easily eliminate the dust generated from another not so natural but completely predictable phenomenon, people young and old are going to drive really fast along a country road.

From now on let’s make your particular road or driveway completely dust free!

Dustcoating Incorporated applying Magnesium Chloride to an unpaved road.
